

Imagination. Innovation. Progress.

Insights,

Gift of the Mind.

The reality asks and technology responds, not by removing the human being from the great problems but forcing him to study them thoroughly in order to solve them. The concept of progress means to have the ability to build a world more suited to humans through the use of technological innovations with particular regard to the environmental protection. Only wish the impossible can lead to what is achievable. The constant research and development has enabled the creation of customized mechatronic solutions designed to fulfill our customer's wish to progress. Quality and experience contribute to promote our MADE IN ITALY.

CUSTOM ENGINEERING

*The Art of Finding Solutions
The Problem-Solving Efficacy*

Automation, as science technique, leads to practical customized solutions that are designed to meet different production needs within the industrial processes. These custom technologies, of partial or radical innovation, promote profitability by reducing the production costs and aiming at improving the quality of the processes and finished products. The applied engineering serves as a solver of the difficulties hitherto considered insurmountable.

MICROWAVES APPLICATIONS

*Principle of the Quality Wood Conservation
Cult of Antiquity*

Following this philosophy and masters of this principle, since 2005 we design sophisticated machines for the heat treatment of disinfestation. Advanced devices that integrate and often replace the traditional methods of heating and gasification. Our experience has led us to become a leader in the design and marketing of the microwave technology for the woodworm treatment of wooden products and immovable structures.

SOLAR TECHNOLOGIES

*Energy Deriving from the Sun
Symbiosis between Nature and Progress*

Thanks to the technological evolution bound by the laws of nature and always marked by a deep respect for it, we have drawn the most interesting solutions thus becoming the spearhead in the field of photovoltaics. Official partners of YASKAWA MOTOMAN, we integrate the robots of this Japanese holding with our technologies for producing the PV panels. Research and selection of the raw materials are crucial to our mission.

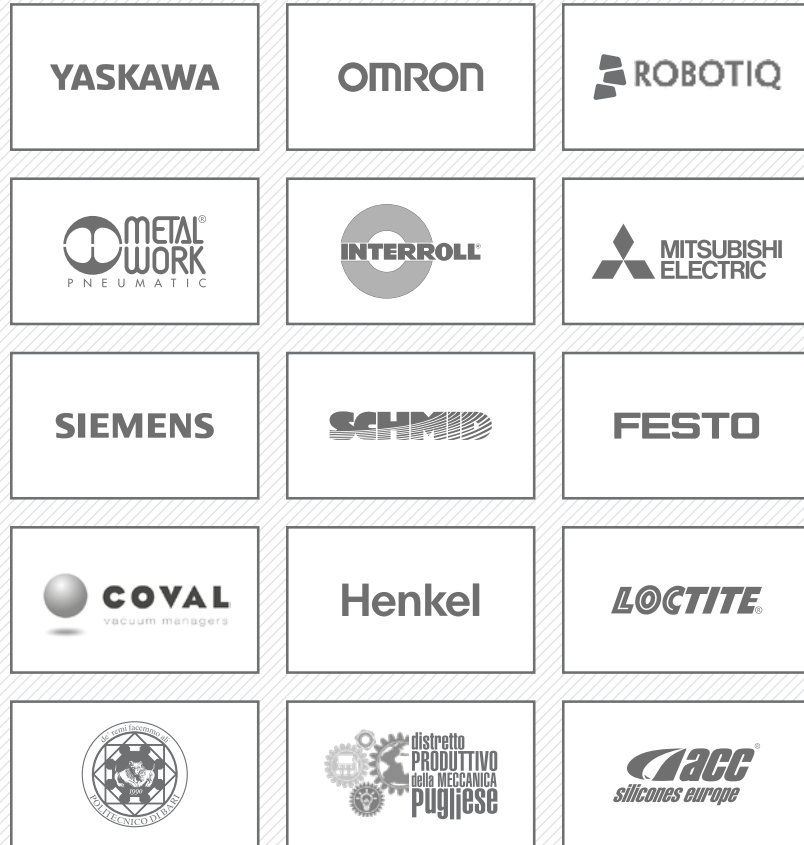

PACKAGING SOLUTIONS

*Guardian of the Soul
Treasure Chest of Solutions*

The matter in motion is produced within the industrial plants as the future is built in the research and development department. On this principle we base our roots by working for years in the sectors of the handling and palletization of the finished products. Quality, efficiency and experience are the cornerstones of our business team. We offer our expertise to propose our customers innovative customized solutions in the fascinating world of packaging and logistics.
